Where does PM2.5 in the kitchen come from

- Stir-Frying: carbon particles, organic compounds, dust
- Oil Breakdown during Frying: release PAHs (highly carcinogenic)
- Incomplete Gas Combustion: PM2.5 + carbon monoxide
- Forgetting to turn on the Hood: keeps pollutants trapped indoors

EFFECTS OF PM2.5 ON CHILDREN WITH SENSITIVE NOSES

Young children with allergic rhinitis are especially vulnerable to indoor air pollution

The background is a dynamic composition of numerous thin, flowing lines in various shades of green and yellow. These lines originate from the left and bottom edges, curving and swirling towards the right. The lines vary in brightness, with some appearing as sharp, glowing streaks and others as softer, more diffuse bands. The overall effect is one of motion and energy, set against a solid black background.
